

Vanderveer Elementary School Entrance Canopy

De Sapio Construction was contracted to replace the existing entrance canopy and sidewalks at the main entrance. The project included the demolition of the existing steel canopy system, removal and replacement of the existing concrete sidewalks and installation of a new prefabricated aluminum canopy system for the Somerville Board of Education. Normally this type of project is completed while school is not in session. Due to delays in the approval of the project the project start date was pushed back to September, when the preschool through fourth grade students would be returning to class. Our firm was now required to take special care to allow for a safe drop-off and pickup of the young students in addition to faculty and staff. The project was completed within the allotted timeframe and without incident to any pedestrians. With regards to the project and our firm, Principal Susan C. Haynes was quoted as saying ["If I had a quarter for every compliment on your work so far, we would both be rich! Thank you for your continued dedication to us!"](#)
